**CONSENT TO BOTOLINUM TOXIN "A" TREATMENT**

Botox is a neurotoxin produced by the bacterium Clostridium A. Botox can relax the muscles on areas of the face which causes wrinkles associated with facial expressions. Treatment with Botox can cause you facial expression lines or wrinkles to essentially disappear. Areas most frequently treated are: a) from lines between eyebrows, corrugators muscles b) crow's feet, eyes c) forehead d) around mouth e) neck. Botox is diluted to a very controlled solution and when injected into the muscles with very small needles and is almost painless. Clients may feel a burning sensation while solution is being injected. A topical numbing cream may be applied if requested without an additional cost. The procedure takes about 15-20 minutes and the results last 3-6 months.

**RISKS AND COMPLICATIONS:** It has been explained to me that there are certain inherent and potential risks and side effects in any invasive procedure and in this specific instance such risks include but are not limited to: 1) Post-injection discomfort, swelling, redness and bruising in rare cases 2) Post-injection bacterial, viral and /or fungal infection requiring additional treatment 3) Allergic reaction 4) Minor temporary droop of the eyelid in approximately 2% of injections, this usually lasts 2-3 weeks 5) Occasional numbness of the forehead lasting 2-3 weeks 7) In a very small number of individuals, the injection does not work as satisfactorily or for as long as usual.

**PHOTOGRAPHS:** I authorize the taking of clinical photographs and their use for scientific purposes both in presentations and file purposes. I understand my identity will be protected.

**PAYMENT:** I understand that this procedure is cosmetic and that payment is my responsibility.

I am aware that when small amounts of purified botulinum are injected into a muscle it causes weakness or paralysis of that muscle. This appears 5-10 days and usually lasts 3-6 months. I hereby voluntarily consent for the trained medical professional selected by Dr. Schroeder to treat the condition described as: Facial Dynamic Wrinkles. The procedure necessary to treat the condition has been explained to me and I understand the nature of the procedure to be: Botox Injection.

I have read the above and understand it. My questions have been answered satisfactorily. I accept the risks and complications of this procedure on the date of signature and any following dates of injections.
